

MC-Rx PBM offers flexible plan designs with quality-focused results and open, fully auditable pricing. We bring every client innovative systems that are fully maintained by our knowledgeable and friendly support team.

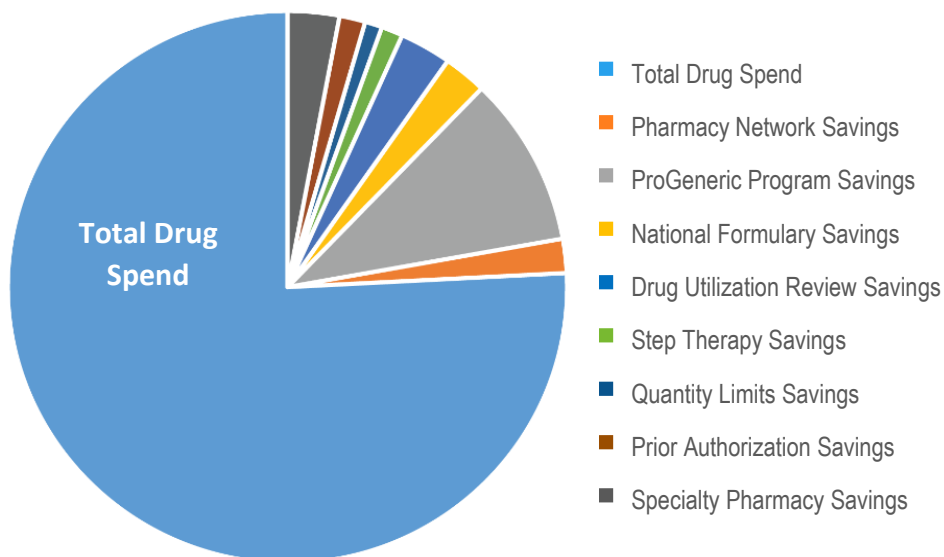

Quality and safety checks are standard features of our online adjudication system. Duplicate therapy determination, medication monitoring and drug utilization review occur concurrently in real-time.

Patient-centric engagement programs have always been at the core of our services and include strong clinical plan support along with easy to navigate member portals.

Cost containment strategies can save clients 25% or more on their overall drug spend.

Our 'lowest net cost' therapy philosophy paired with an 'open' pass-through benefit design has kept our clients' drug spending below the national growth rates for the past ten years in a row.

*We decided that we needed to make dramatic changes in our pharmacy benefits and our PBM really wasn't helping us. When we implemented, we used all of MC-Rx's savings tools, and without much disruption at all to our Union members, we saved 37% on our total drug spend and our members saved about 24% on their copays in the first year.*
