MC-Rx
Powered by ProCare Rx

Better Health. Within Reach. Every Day.

SMART

Specific programs to increase or support your quality improvement programs.

Measurable data that is hybrid, cloud-based, and available anywhere at any time.

Attainable clinical programs designed for prescription accuracy and member safety.

Relevant medication savings management and health analytics.

Time-based clinical analytics, intervention triggers, and patient engagement programs.

IMPROVEMENT

Quality and patient-centric healthcare are real elements of the current health and wellness climate. Poor healthcare is not only responsible for unnecessary illness, but it can substantially impact a hospital's or MCO's bottom line because of HEDIS measurements and star ratings.

MC-Rx has been assisting our clients with quality healthcare since 1988. Some standard features of our online adjudication system are the performance of real-time duplicate therapy determination, persistent medication monitoring, age-related medication control, drug utilization review, and determination of adherence, which are all directly related to chronic disease management.

When it comes to true pharmacy benefit management, you can rest assured that your program is in capable and experienced hands.
